To: San Francisco Board of Supervisors,

As the 2001 founding Chair of the Hunters Point Naval Shipyard Restoration Advisory Board's Radiological Subcommittee and Contributor to the 2005 Draft Final Historical Radiological Assessment, I am submitting this Tetra Tech Investigation of Anomalous Soil Samples for your review. Please direct this serious matter to Land Use Subcommittee.

This investigation documents from January 2008 to October 2012, 2,500 anomalous soil samples were collected from 20 survey sites on Parcels C&E at HPNS. These samples were thoroughly investigated and found to be fraudulent at 16 sites. At one site soil was analyzed and found to contain Radium 226- a gamma emitter capable of stripping electrons from human tissue- in concentrations exceeding release criteria.

Please note the Radiation Control Technician most closely linked to collection of the anomalous samples via chain of custody determination died during the investigation. I am demanding that the San Francisco Board of Supervisors investigate the health and human safety consequences of 4 years of documented negligence and fraud in the handling of radiation contaminated soils at HPNS. The BOS must demand that CalOSHA investigate the cause of a worker death linked to handling of radioactive soils. The BOS must demand that the Nuclear Regulatory Commission, California Department of Health Services and the Navy Radiological Affairs Office respond immediately to the public and worker health and safety risks posed by the damaging findings of this investigation.

Ahimsa Porter Sumchai MD.
